

PRODUCT SPOTLIGHT

HEALTHCARE AGENCIES

Cloud-based tools for policymakers

Esper's suite of modern workflow and policy management tools are purpose-built for healthcare agencies across the United States. Our cloud-based, SaaS platform allows for data-driven research, collaborative policymaking and public-facing engagement on the policies that impact citizens and employees.

Streamlining health and safety policymaking

With Esper, healthcare agencies have one centralized location for policy research, drafting, review and publishing. In addition, agencies can leverage Esper as a way to engage their citizens and capture public comments on policies that will directly impact them.

Modernizing the tracking and review of rulemakings

Esper's platform centralizes all regulations, laws and policy documents—allowing agency staff to collaboratively draft new policies, amendments and repeals from a single source of truth. This ensures policies are up-to-date and simplifies compliance for citizens and businesses.

Improving citizen engagement with public comments

Healthcare agencies are also able to open up regulations to public commenting through the Esper platform. Agencies can collect public comments through the Esper software, along with importing, managing and analyzing comments from other channels.

Empowering healthcare agencies across state & federal government
